

## U.S. Curriculum Correlations by State

### Montana

#### Science Content Standard 4

Students demonstrate knowledge of the composition, structures, processes and interactions of Earth's Systems and other objects in space, and demonstrate thinking skills associated with this knowledge.

Describe and model the motion of the tilt of Earth in relation to the Sun, and explain the concepts of day, night, seasons, year, and climactic changes.

Describe the Earth, Moon, planets, and other objects in space in terms of size, structure, and movement in relation to the Sun.

Identify scientific theories about the origin and evolution of the Earth and Solar System.
