Standard 5: The Universe

The Universe is an ever-changing system of matter and energy that exists now, in the past, and in the future. The student will engage in investigations that integrate the process standards and lead to the discovery of the following objectives:

1. The stars differ from each other in size, temperature, and age, but they appear to be made up of the same elements that are found on Earth.
2. All stars have a life cycle including birth, development, and death. Fusion reactions in stars release great amounts of energy and matter over millions of years.
